

International Research Training Group on Semantic Integration of Geospatial Information

October 2008 – March 2013

Announcement of PhD and Post-Doc Scholarships

With this International Research Training Group (IRTG), we address problems arising when integrating geospatial information from multiple sources to reason and support decisions about the human environment. These problems are situated in the overall research challenge of *supporting effective geospatial reasoning across age and cultures*. The common scientific thread of the entire program is the ambition to create computationally tractable solutions to problems of semantic integration.

The IRTG will create an international center of excellence in the area of geospatial information integration and involves the following partners:

- University of Münster, Germany
- University of Bremen, Germany
- University at Buffalo, USA.

Supported by the German Research Foundation (DFG), the program offers

- **Six scholarships for doctoral researchers**
(3 years, full-time, 1468 € per month, family support if applicable)
- **Two post-doctoral researcher positions**
(2 years, full-time, TV-L E13)

in Münster or Bremen. Requirements are an excellent degree in Geoinformatics, Informatics or a related field, and excellent English language skills.

Further information at <http://irtg-sigi.ifgi.info/>.

For all inquiries, please contact the program spokespersons, Prof. Dr. Werner Kuhn, University of Münster, kuhn@uni-muenster.de or Prof. Dr. Christian Freksa, University of Bremen, freksa@informatik.uni-bremen.de.
